CordialChart: Accreditation, Appendix G, and AEMT

Appendix G is the competency matrix every paramedic program lives by, and the major trackers all record it. What makes CordialChart different is how it gets there.

Appendix G counts itself

Because students chart realistic, de-identified PCRs, every patient contact, intervention, and team lead automatically counts toward the Appendix G minimums and skill totals. There is no second tally to keep and no double entry. The chart is the accreditation data. Vitals count once per patient, team leads count on flagged patients, and skills count from successful interventions on any shift.

A ready-to-graduate verdict, per student

CordialChart rolls the Appendix G minimums, signed shift evaluations, professional behaviors, and terminal and summative competency into one Graduation Requirements Report. For each student it says ready or not-ready and lists exactly what is outstanding. You see where a cohort stands today, not the week before the site visit.

Your minimums, your gates

Edit the required numbers and graduation gates per level, from EMR to Paramedic, to match your program and your accreditor. CordialChart ships with CoAEMSP-aligned defaults; you set the bar where your program sets it.

AEMT, not just Paramedic

CoAEMSP now offers voluntary AEMT accreditation, so AEMT programs need the same kind of documentation Paramedic programs have always kept. CordialChart tracks AEMT against its own competency minimums the same way it tracks Paramedic, with editable gates and the same readiness report, so a program taking on AEMT accreditation is not starting a brand-new spreadsheet.

One place for the whole site visit

Contacts by age and chief complaint, skills, hours, team leads, professional behaviors, terminal competency, site agreements and their expirations, preceptor credentials, all tracked together and exportable as the report you hand over. When CoAEMSP shows up, you run a report instead of chasing five spreadsheets.

The honest framing

CoAEMSP and Appendix G tracking is standard across the major trackers. CordialChart's difference is that it is wired to the charting students already do, so the numbers are always current and the readiness verdict is always a click

away.

Exact requirements vary by accreditor and state. Confirm current CoAEMSP standards for your program.
