CordialChart

The clinical rotation tracker EMS programs actually want to use.

Every rotation, charted.

One login from EMR to Paramedic. Real, de-identified charting that gets students job-ready.

THE PROBLEM

Every level is a new login. Every preceptor is a new headache.

Students start over every level

A new account at each step, so a student's history scatters across tools.

Preceptors fight a login

They just want to sign a student off, not create and manage an account.

EMR and AEMT get left out

The big trackers skip levels your program actually teaches.

Accreditation is a scramble

Appendix G lives in five spreadsheets until the week before the

THE SOLUTION

One system for the whole journey.

One login, EMR to Paramedic

The same account the whole way up. No lost history.

Charting that looks real

De-identified documentation modeled on a true ePCR.

Preceptor sign-off, no account

Signs on their own phone. Nothing to create or remember.

Closed-loop messaging

Read-back, named sender, nothing deleted, full export.

Works offline

Installs like an app, keeps working in the ED basement.

Accreditation in one place

CoAEMSP minimums and gates, with a readiness verdict.

REALISTIC CHARTING

Charting that looks like the real thing.

Per patient and de-identified, modeled on a real ePCR. Students document the detail they will on the job, so they graduate already fluent in it, not learning the software at their first paid shift.

Three narrative formats: Chrono, DCHART, and SOAP. Programs can require the one they teach.

ON THE CHART

IV: gauge, site, and attempts

Medication: name, dose, and route

Airway: device and size

History, meds, and allergies as chips

Every chart has a unique ID to reference

EVERY LEVEL, ONE ACCOUNT

From first responder to paramedic, each level builds on the last.

EMR

$24

First-on-scene BLS, CPR and AED, bleeding control, basic airway.

EMT

$29

Full BLS assessment and transport, splinting, spinal, assisting meds.

AEMT

$58

Entry ALS, IV and IO with fluids, select meds, advanced airway adjuncts.

Paramedic

$79

Full ALS, cardiac and 12-lead, the full formulary, advanced airway.

Sold per student, one time, no expiration. A student who advances unlocks the next level on the same account and keeps all of their history.

ACCREDITATION

Appendix G, without the spreadsheet scramble.

It counts itself

Every patient contact, intervention, and team lead counts toward the minimums straight from the charting. No second tally.

A readiness verdict

One report says, per student, ready or not-ready, and lists what is outstanding. You see where a cohort stands today.

AEMT too, not just Paramedic

CoAEMSP now offers voluntary AEMT accreditation. CordialChart tracks AEMT the same way, with its own gates.

The major trackers all record Appendix G. CordialChart's difference is that it is wired to the charting students already do, so the numbers are always current and the readiness verdict is always a click away.

PRECEPTOR SIGN-OFF

A signature that actually holds up.

Preceptors sign from their own phone, with no account to create and nothing to remember, and never by logging into or borrowing a student's account. Each signature is tied to the preceptor and locked to that record.

No account to create | Never the student's login | Tamper-evident | Locked to the record

COMMUNICATION AND COMPLIANCE

A record of every conversation, not just every chart.

CordialChart's chat is built for a training program, not a group text. Read-back closes the loop on instructions. Every message is attributed to a named sender and can never be deleted, by anyone, so the thread is a defensible record.

- Cohort, group and private chat
- Read-back, closed loop
- Named-sender attribution
- No deletes, ever
- Instructor view and export
- Discuss any chart in one tap

COMPARE

Where CordialChart is different.

	CordialChart	FISDAP	Platinum
Covers EMR	Yes	No	Yes
EMT, AEMT, Paramedic	Yes	Yes	Yes
One account across all levels	Yes	No	No
CoAEMSP and Appendix G	Yes	Yes	Yes
Mobile app, works offline	Yes	Yes	Yes
Preceptor signs, no login or student account	Yes	No	No
Volume and cohort discounts	Yes	No	No
Lowest price per level	Yes	No	No

All three cover EMT through Paramedic, offer a mobile app, and support CoAEMSP tracking. FISDAP and Platinum Planner are capable, established tools. Comparison reflects public information as of 2026; confirm current details with each vendor.

PRICING

Below the major trackers at every level.

EMR	EMT	AEMT	Paramedic
$24	$29	$58	$79
per student	per student	per student	per student

One time, no expiration. Volume discounts the others don't offer: 5% at 10 students, 10% at 25, 15% at 50, 20% at 75, and 25% at 100. You don't have to buy a whole cohort at once.

WHY CORDIALCHART

What a program gets that it can't get elsewhere.

One unified system

No migration, no lost history. One account, EMR to Paramedic.

Covers EMR

The level the big trackers skip is included.

Preceptor sign-off, no login

Defensible, on their own device, never the student's account.

Closed-loop chat

Named sender, nothing deleted, exports for the record.

Lower price, volume discounts

Below the major trackers at every level.

Realistic ePCR charting

Graduates who are job-ready, not learning the software on shift.

CordialChart

See it with your own program.

A live walkthrough using your levels, your sites, and your rotations. We'll set it up around the way your program already runs.
